

ABSTRACT

“AUTONOMOUS ELECTROGRAVITATIONAL ENERGY ALTERNATOR”

SUBJECT OF THE INVENTION: This descriptive report refers to an invention patent application. The invention is an autonomous electrogravitational energy alternator, whose purpose is to function as a totally autonomous alternator, without the need to be used or driven by other auxiliary means, such as petrol or diesel internal combustion engines, gas or coal-fired turbines, nuclear power plants, etc.

Being completely autonomous, the invention doesn't require any fossil fuels and it doesn't pollute or produce waste of any kind.

APPLICATION OF THE INVENTION: The application of this invention is within the alternator manufacturing industry and similar fields.

ANTECEDENTS TO THE INVENTION: The applicant is unaware of any current invention that could be considered as an autonomous electrogravitational energy alternator.
